

Supplementary Table 1. Grade of breast density in mammography and background parenchymal enhancement in MRI according to menstrual status

Densities on mammography	No. (%)		<i>p</i> < 0.001
	Premenopausal (n = 28)	Postmenopausal (n = 46)	
Predominantly fatty density	0	1 (2.2)	
Scattered fibroglandular density	3 (10.7)	12 (26.1)	
Heterogeneous density	14 (50.0)	32 (69.6)	
Extremely density	11 (39.3)	1 (2.2)	
BPE on MRI			<i>p</i> < 0.001
Minimal	0	2 (4.3)	
Mild	5 (17.9)	21 (45.7)	
Moderate	15 (53.6)	18 (39.1)	
Marked	8 (28.6)	5 (10.9)	

BPE = background parenchymal enhancement; MRI = magnetic resonance imaging.
