

Supplementary Figure 1. Image of a 30-year-old patient with ductal carcinoma in situ in the left breast. (A) In the axial plane early contrast enhancement MRI image, the size of the lesion was measured to be 4.2 cm, and the background parenchymal enhancement was remarkable. (B) The size of the lesion on ultrasonography was measured to be 1.5 cm. The size of the tumor on pathology was measured to be 1.2 cm.
